To Whom it May Concern,

**Re: Algonquin Power Co. (“Algonquin”) – Proposed Amherst Island Wind Facility,
Ontario (the “Project”)**

As previously indicated, we are the solicitors for the Association for the Protection of Amherst Island (“APAI”).

Amherst Island residents have written to Mr. Fairfield expressing their concerns regarding stray voltage. No satisfactory replies have been received. We are writing to you today to advise that if wind turbines are erected on Amherst Island APAI will be retaining the services of a qualified engineer in order to measure stray voltage on the properties of APAI members.

The baseline measurement will occur one week prior to the turbines beginning operation and will occur on a regular basis thereafter.

If any stray voltage is found to have occurred following the beginning of operations, the turbine(s) nearest to the locale where the stray voltage has occurred will be identified. APAI will

be applying to the Ontario Superior Court of Justice seeking an injunction to stop the operation of the turbine(s) responsible for the stray voltage.

Given that stray voltage is an established issue resulting from the operation of industrial wind turbines, in addition to injunctive relief, APAI and/or its members reserve the rights, amongst others, to bring further civil claims for damages, including punitive, aggravated and exemplary damages. They also reserve their rights to bring charges against Algonquin, its Officers and Directors under the Ontario *Environmental Protection Act*, R.S.O. 1990, c. E.19 for causing an adverse effect.

Should you have any questions or require additional information please advise.

Yours very truly,

ERIC K. GILLESPIE
